

Functional dependencies

Table people → first name and last name.

Table coaches → CID and number of years of coaching,

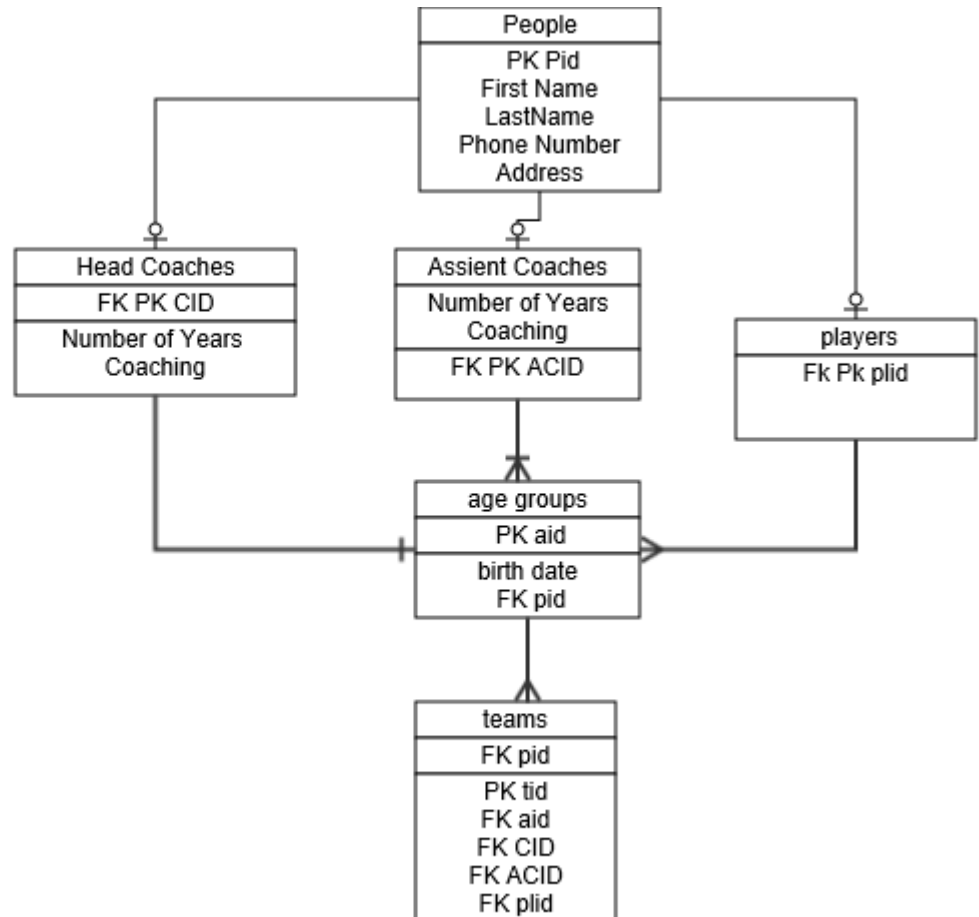

Table assistant coaches → ACID and number of years of coaching

Table player → plid determines itself

Table age groups → aid and birth date and aid and pid

Table teams → tid and pid, aid, acid, plid.

ER diagram

The reason my ER diagram is in 3rd normal form is because each table has one, whole primary key.

View for 10 to 14 year olds
